As virtual reality content becomes increasingly pervasive so do the apps for users to enjoy this kind of videos. There is now a wide selection of VR media players for Android and iOS. However, since the market is still new, consumers are not yet familiar with them. And since mobile storage space is at a premium, everyone wants to get the app that delivers the perfect 'quality - resource usage' ratio. What Should You Look For in VR Media Players? The question is: what kind of quality and benefits should users look for in VR media players? When it comes to classic video players, most people know exactly what they are looking for, as they have had a long experience testing various software and apps. See Also: Best VR Hand Tracking Games for Oculus Quest in 2020 When it comes to VR media players, things are not very different. A reliable player that satisfies the average user's needs should have the following features: Compatible with various video formats; Capable of accessing media from various sources, such as local storage and URLs; Allow the user to set various parameters for an optimal viewing experience; Good head tracking with reduced latency. These being said, here is our selection of VR media players for Android and iOS you should try: 1. VaR's VR Video Player Supported OS: Android This is one of the best free VR video players for Android devices. It offers great viewing experience both for VR games and 3D videos and supports all modes, such as stereoscopic side by side, stacked, (panorama) 180° and 360°, as well as regular videos. It is developed by a gaming company, thus it features excellent head tracking and offers the user full control to adjust various parameters, from basic ones (saturation, contrast, brightness) to advanced ones, such as field of view, lens correction, and eye distance. 2. Mobile VR Station Supported OS: iOS and Android Mobile VR Station is one of the VR media players with the best compatibility as it is a native app written in Obj-C with SceneKit. Thus, it is compatible with every headset and has a very flexible configuration. With it, users can: Watch movies in a virtual theater; Watch 3D, 180° and 360° content. Watch videos and photos stored on the device; Experience panoramas with a depth of view; Access external video content; Watch HTML5 video on Mobile Safari browser using the Micro VR Station extension. The app offers various projection methods such as dome, full-dome, curved, cylinder, and spherical. Also, it can load UTF-8 formatted .srt subtitles for videos. However, you should note that you cannot use Mobile VR Station to play DRM content, such as titles purchased from iTunes. 3. VR Player Pro Supported OS: Android VR Player Pro supports all 2D and 3D video files and a wide range of video formats, such as mono, over-under, and side-by-side. Users can customize their experience with ambient lighting effects and projections such as plane, dome, full-dome, cube, sphere, and cylinder. As for the storage medium, VR player can access both files on local storage and URLs. Moreover, users can use either the keyboard or the gamepad to interact with the app. 4. VR One Cinema Supported OS: iOS and Android Carl Zeiss is one of the best-known manufacturers of camera lenses. Aside from the VR media player, the company also has its own VR phone headset. Although it is a branded player, VR One Cinema stands out for its compatibility with almost any VR headset. Other useful features of the app: Using head movements to select content; On-screen menu activation by looking at the exit doors; Re-centering viewport for optimal comfort; Drag and drop playlist creation. 5. VR Gesture Player Supported OS: Android We end this list of recommended VR media players with an Android app that allows users to interact with it by hand gestures. This touchless interaction is extremely comfortable for users who want to experience a truly immersive movie theater. VR Gesture Player is capable of: Side-by-side 3D and top-bottom video play; Head tracking; Sleep mode to save battery; Ability to search and play YouTube videos. VaR's VR Video Player app may not be working for you due to some issues that your device may have or your internet connection problem. If you think that VaR's VR Video Player app has an issue, please post your issue using the comment box below and someone from our community may help you. Also in the mean time you can try the fixes mentioned below. It is one of the most common problem in android operating system. Usually when you open an app, you will see a black screen for few seconds and then app will crash with or without an error message. There are few ways to fix this problem. Most of the times, it might be a temporary loading issue. You just need to press the recent applications menu (usually the first left button) in your phone. Then you close the app that has this issue. Now open the app again. It may work normally. Try Hard reboot in your Android mobile. Press and hold down the "Home" and "Power" buttons at the same time for upto 10 seconds. Then, release the buttons and hold down "Power" button until the screen turns on. Now you can try opening the app, it may work fine. If none of the above working, you can wait till your phone battery drains and it turns off automatically. After that put it to charge, and press the power button. It may work after this. Finally, if you can't fix it with anything, you may need to uninstall the app and re-install it. Android usually restores all settings after you re-install and log into the app. You can see if that fixes it. Even in some rare cases, the re-install step also don't work. If that is your case, try installing older versions of the app. Good luck! There are few situations that may cause the load issue in mobile apps. The VaR's VR Video Player app server may be down and that is causing the loading issue. Please try after few minutes. Your wifi / mobile data connection not working properly. Please check your data connection. Too many users using the app at same time. Please try after few minutes. I'm having VaR's VR Video Player login issue or account related issues. If you have login or account related issue, please check the following steps. The VaR's VR Video Player server may be down and that is causing the login/account issue. Please try logging in after few minutes. Your wifi / mobile data connection not working properly. Please check your data connection. You may be trying with wrong login credentials. Please confirm the details that you are entering is correct. If you're using third-party social networks to login such as facebook, twitter, google etc, check whether that service is working properly by visiting their official website. Your account may be banned or deactivated for activities. Please read error messages. Check your wifi / internet connection for connectivity. Please check your mobile storage space. If you don't have enough space in your disk, the app can't be installed. Verify that the app you're trying to install supports your android version. Please check your wifi / mobile data connection and verify that it is working properly. It may be down and stopping you from updating the VaR's VR Video Player app. Confirm that you have enough storage space in your phone to download updates. If you don't have enough storage space, it can be blocking the app updates. Check your phone volume if you have audio problems. Try to use headphones to find out whether it is an issue with your speakers or with the app. If you've video loading problem, please check your internet speed and wifi connectivity. Go to your Apps->VaR's VR Video Player->Notifications and check whether notifications enabled or not. If it is not enabled, please enable it. Also if you don't get notification alert sounds, re-verify that you don't accidentally muted the app notification sounds. It may take some time for the app company / developer to process the payment and credit to your account. Please be patient for 24-48 hours and see if the amount gets credited to your account. If not, please contact the development company using the contact details given below. Email Address: You can go to your account menu and then mostly you may see a withdraw option once you reach your withdrawal threshold. You can use that feature to initiate a withdrawal request. You can login to your paypal and see if there is any money credited. If you don't see the transaction, you can open the app and check the withdrawal status. If you see the withdrawal is successfully processed and don't get it in your bank/paypal, contact the app developers / support. Support Email: The ultimate player for VR and 3D videos that gives you full control and supports all modes with perfect head tracking response. VaR's VR Video Player External content has landed. Attached a lighting to usb adapter and play some media. Mobile VR Station is a media player designed for Virtual Reality with head tracking. With this app you can view your Photos, Panoramas, Videos & Files projected onto a virtual screen floating in space. Our app supports displaying standard 2D and 3D Side By Side/Over Under content. The app can't display DRM protected content, such as content bought from iTunes."The most feature-packed VR media player available, with editable profiles that let you adjust the viewing experience across multiple devices and VR adapters. Excellent all around!"-Quote from Manuel M, Beta Tester! If you need help we provide links inside the app to view our Facebook, Twitter and YouTube channel. Usages:- Works with every headset, very flexible configuration- Watch movies in a virtual theater- Watch 3D 180 Degree content.- Explore 360/Spherical movies (Great for demos).- Experience 3D content (Left/Right, Right/Left and Top/Bottom).- See your device's photos & videos in a new way.- View panoramas with some depth.- Access external video content with UPNP.- Watch HTML5 Video from Mobile Safari with Micro VR Station extension.Details:- Native App, written in Obj-C with SceneKit- Watch App for Remote control capabilities- This app is currently only available in English- Free version limits video playback to the "first" five minutes.- Supported formats: MOV, MP4 & M4V.- Supported HMDs: None (Mono), None (SBS), Cardboard, Altergaze, Firefly, Custom,- Cardboard QR scanner available for quick setup- Supported Devices: Any device running iOS 8.1 can install the app, but iPhone 5S/iPad Mini (Retina) and above provide a great experience.- Projections: Dome, Full Dome, Curved (Large curve), Plane (Flat), Cylinder & Spherical- Skyboxes: 47 built in options.- Profiles: Each user/headset can have their own specific configuration.- Audio: Language switching available.- Subtitles: The app can load UTF-8 formatted *.srt files, after a movie has been started- Files: Each file has its own preview icon and meta data. You can either generate a icon or upload your own. Please see the FAQ on how to make your own icons.- Bluetooth Remote: If your headset has Play/Pause & Next/Previous buttons, you can use them to control video playback.- UPNP: Basic support for viewing & downloading video & image content. Music can play if you mess with a few settings.- Other File Formats: We are researching how other formats and higher quality content could be displayed, we understand the need and want to deliver in the future.-1080P @ 60 FPS is available on 5S+ and beyond. Devices under 5S should consume 720P.- 4K @ 30FPS is available for 6S, 6S+, 5SE & iPad Pro- Support for SanDisk™ iXpand Drives- Please see the guide book for more informationTips:- If video playback starts to lockup, or a setting doesn't stick please turn your device off and on again.- It's strongly recommended to go through Training at least once and check out the help videos if you have time.- Every projection is editable, just dig into "Manage Presets" for the details.- If you really need help, ask on our Facebook page, Twitter account, or reddit [r/iOSVR/controls/](https://www.reddit.com/r/iOSVR/controls/)- MFI Controller/Bluetooth keyboard support (While in VR).- When not using a HMD device buttons can be tapped.- Tap anywhere in the right eye or empty space to recentre view.- Tap 3 fingers on screen to quickly exit VR.- Support for Occipital Bridge Controller Aug 23, 2022 Version 2022.6.0.1.- Updates to bring back controller support.2. Added support for playing external content via the Files app.A. For example use a lighting to usb adapter to play content from a flash drive, VR files that I access through upon are paid. If I play the badly focused files directly from my phone or from like google drive they are perfectly focused. Would be nice to be able to access files directly from pc on the same wifi network or from iCloud. Google drive is extremely slow to update. I also wanted to add that the icons that appear with the videos in unpnp disappear after you run the video the first time. Displaying the video title all the time in either regular mode or in grid would make it easier to find clips in directories with lots of files. I thought I would add an update. I tried using Plex as my unpnp instead of Playon and my focus issue went away. This also makes it easier to access files on my laptop also. So I guess I solved two of my issues lol. Great to hear you solved your own issues. Now the issue with the grid is I didn't want to overload the screen with text, which is a costly to display and may tank the frame rate. After going through about 5 different VR players, none of which could accomplish what I needed, this one is the absolute best of the best. Has an insane amount of customization options and the quality of the video playback is awesome. The only tiny issue I have is alignment problems. I do seem to have to tap the screen every few minutes or so to re-center it but I had this problem on every other VR player. The nice things about this one is I can tap anywhere on the screen and bam, realigned again. Just need a headset now with a button that taps the screen without taking out the headset. Either way, amazing job. Keep up the good work. Bought the ultimate version almost immediately. You should try using the of the available Eye modes to keep the player centered, since drift has been a constant problem. Edit 3: Issue FIXED. Without a doubt the best VR player in IOS app store feature wise. Def worth the price. Highly recommend! Edit 2: The developer stated they will look into this minor issue. Edit: any way to get rid of the automatic playback pause if there is buffer? (Streaming). Great app first of all. No question there. However, in trying to fix the buffer problem, it appears another problem was introduced. Now when you hit next to go to the next movie etc when streaming, the playback will often go back and forth between play and pause, and you actually have to hit play sometimes to proceed. Sometimes if you scrub to a further location and there is the slightest buffer, playback switches to "paused". This did not happen at all with 3.2. Gawd, wish I never upgraded. I stream from my own network drive so no major buffer issues so this play/pause is super annoying. Let me know if you find anything else, have fun :) The developer, Michael Fuller, indicated that the app's privacy practices may include handling of data as described below. For more information, see the developer's privacy policy. The developer does not collect any data from this app. Privacy practices may vary, for example, based on the features you use or your age.
